7. Voluntary problem set: Finite automata

These problems are completely **voluntary** (no bonus points given, either) that one may solve, for instance, before the exam to practise the constructions.

Exercise description My submissions **0 / 50** ▾

Designing an NFA for a language

Consider the language $L = \{w \in \{a\}^* \mid \text{the length of } w \text{ is a multiple of 3 or 5 (or both)}\}$.

Design a non-deterministic finite automaton (NFA) that recognises the language. ϵ -transitions are allowed.

Reset

Deterministic:
yes

- Click on the canvas to add new states.
- You can also move existing states by dragging them.
- Click on transition labels to edit them.
