7. Voluntary problem set: Finite automata

These problems are completely **voluntary** (no bonus points given, either) that one may solve, for instance, before the exam to practise the constructions.

Exercise description | My submissions **0 / 50** ⌄

Designing a DFA for a language

Consider the language $L = \{w \in \{0,1\}^* \mid w \text{ contains the substring } 0100\}$.

Design a deterministic finite automaton (DFA) that recognises the language.

⬭ ◯ ↗ ✗ | Reset | Deterministic: yes

- Click on the canvas to add new states.
- You can also move existing states by dragging them.
- Click on transition labels to edit them.
